PROFESSIONAL SUMMARY

IT and Systems professional combining hands-on infrastructure experience - Windows Server, Active Directory, VMware, and Microsoft 365/Azure administration, including Microsoft Intune, Entra ID, device management, and endpoint security - with a growing specialization in applied AI and automation, including Retrieval-Augmented Generation (RAG), intelligent agents (LangChain, LangGraph), and workflow automation (n8n). Background in 24/7 mission-critical operations under strict SOP/SLA and ITIL-aligned frameworks, with proven adaptability across rotating shifts and sustained composure in high-pressure, production-critical environments. Currently completing a Bachelor's Degree in Systems Engineering, backed by hands-on certifications and training spanning identity and endpoint management, cloud infrastructure, networking, and AI engineering. Combines technical depth with clear documentation and cross-functional collaboration to deliver reliable, well-supported solutions.

SKILLS

Operations & Frameworks: Tier 1/2 Technical Support, Incident Management & Documentation, ITIL-Aligned Processes, SOP/SLA Compliance, 24/7 Shift Operations, Root Cause Troubleshooting

Server & OS Administration: Windows Server 2022, Windows Desktop, Linux Fundamentals

Core Infrastructure: Active Directory (OUs, GPOs, User Management), DNS, DHCP, Networking (CCNA)

Virtualization & Cloud: VMware Workstation/ESXi, Hyper-V, Microsoft Azure Fundamentals (AZ-900 in progress), Google Cloud Foundations

AI & Workflows: RAG (Retrieval-Augmented Generation), LangChain, Agentic AI Architecture, n8n Automation, REST API Integrations

Productivity & Scripting: Microsoft 365, Microsoft Intune, Microsoft Entra ID, Python, C#, Dynamics 365 Finance & Operations Fundamentals, Power Platform & Dataverse Fundamentals

PROFESSIONAL EXPERIENCE

Intel Corporation, Costa Rica

2023 - 2025

Technician Operator

- Operated TSX-certified die-attach equipment for server chipset production - a highly precise process previously restricted to L2/L3 technicians - bonding gold-plated dies to substrates under strict thermal, vacuum, and gas (oxygen/nitrogen) parameters, safeguarding product quality on every run.
- Monitored bonding parameters (speed, force, temperature) through Intel's proprietary process-control software, proactively reading logs and graphs to catch anomalies before they escalated into failures or production loss.
- Diagnosed and resolved equipment errors (vacuum/suction failures, substrate positioning) within SLA-defined time windows, escalating complex cases to L2 technicians or engineering to keep the line running with minimal disruption.
- Owned shift passdowns, machine setups, calibrations, and X-ray verification across a 24/7 production environment, maintaining precise incident and production documentation for Team Leaders and cross-shift continuity.
- Sustained consistent performance and attention to detail through 4x3 rotating night shifts (6 PM-6 AM, rotating every 6 months) in a high-pressure, shared work-cell with operators, technicians, and engineers.

EYK Security, Costa Rica

2022

CCTV Operator

- Delivered proactive, enterprise-wide monitoring of CCTV networks and access-control systems, identifying and documenting security incidents in real time and coordinating high-priority escalation protocols.

PROJECTS AND HOME LABS

Windows Server 2022 Home Lab

VMware Infrastructure

- Designed and deployed a virtualized enterprise lab in VMware Workstation Pro, provisioning two virtual machines - one configured as a Windows Server 2022 domain controller/admin server and one as a Windows client workstation - connected on a shared virtual network to simulate a real client-server enterprise environment.
- Installed and configured Active Directory Domain Services (AD DS), promoted the server to a domain controller, and sized/allocated CPU and RAM resources across both VMs.
- Created Organizational Units (OUs), user accounts, and Group Policy Objects (GPOs) to manage permissions, security policies, and centralized administration between the admin server and the client machine.

HR Process Automation Assistant

Oracle Next Education (ONE)

- Built and deployed an automation assistant using n8n workflow automation and a Retrieval-Augmented Generation (RAG) pipeline with Cohere embeddings for contextual document retrieval, combined with REST API integrations and LLM-based conversational support, connected to PostgreSQL (Neon) and Telegram.

Alura Agente Inteligente

Challenge Alura Latam (Oracle Next Education)

- Built a RAG-based document Q&A agent (LangChain, FAISS vector store) that lets users query internal PDF/CSV business documents in natural language, with LLM integration (Grok/Gemini) and exact source citations (document and page/row).
- Containerized with Docker and deployed to Oracle Cloud Infrastructure (OCI) Compute; interface built with FastAPI and a Streamlit/HTML5 chat UI.

EDUCATION

Fidélitas University

Expected 2029

CERTIFICATIONS AND TRAINING

- Tech AI Builder, ONE AI FOR TECH LATAM (Alura Latam x Oracle) - 5 formaciones completed:
 - o AI Foundations & Leveling - computational thinking, Git/GitHub, AI and Machine Learning fundamentals, Python for AI
 - o Generative AI Development & Orchestration - applied prompting, AI-assisted development, LLM orchestration with LangChain
 - o AI Agent Engineering & Automation - intelligent agents with LangGraph, workflow automation with n8n
 - o Advanced Data Intelligence & RAG - Retrieval-Augmented Generation, embeddings and vector databases, LangChain
 - o Oracle Cloud Infrastructure - cloud application deployment, databases, and infrastructure as code on OCI
- Akamai Network Engineering Specialization, Coursera (Akamai Technical Academy) - In Progress: Operating Systems, Networking, Databases, Programming, and Security Fundamentals
- SC-300: Identity and Access Administrator - Exam Scheduled, October 2026
- MD-102: Endpoint Administrator - Exam Scheduled, October 2026
- Oracle Cloud Infrastructure (OCI) AI Foundations Associate - Preparation Stage
- Microsoft Azure AZ-900: Azure Fundamentals - In Progress, DataCamp Preparation
- CompTIA A+ Professional Preparation, Coursera - Completed
- Cisco Networking Academy - CCNA: Introduction to Networks - Completed
- Google Cloud Foundations, Academic Training - Completed
- Oracle Next Education (ONE): AI Agents Immersion - Completed

PROFESSIONAL DEVELOPMENT

- Microsoft AI Skill Fest 2026 - Foundations of Agentic AI, Agent Architecture Design, and AI Systems Development Lifecycle (SDLC) Integration.
